Summary Prospectus

August 28, 2020

Before you invest, you may want to review the Fund's prospectus, which contains more information about the Fund and its risks. The Fund's prospectus and Statement of Additional Information, both dated August 28, 2020, are incorporated by reference into this Summary Prospectus. You can obtain these documents and other information about the Fund online at www.cmgmutfunds.com/prospectuses. You can also obtain these documents at no cost by calling 1-866-CMG-9456 or by sending an email request to OrderCMGFunds@ultimusfundolutions.com.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Fund's shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports. Instead, the reports will be made available on the Fund's website www.cmgmutfunds.com, and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you have already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from the Fund electronically anytime by contacting your financial intermediary (such as a broker-dealer or bank) or, if you are a direct investor, by following the instructions included with paper Fund documents that have been mailed to you. You may also elect to receive all future reports in paper free of charge.

Investment Objective: The Fund's investment objective is to generate capital appreciation.

Fees and Expenses of the Fund: The following table describes the fees and expenses that you may pay if you buy and hold shares of the Fund. You may qualify for sales charge discounts on purchases of Class A shares if you and your family invest, or agree to invest in the future, at least \$50,000 in the Fund. More information about these and other discounts is available from your financial professional and in **How to Purchase Shares** on page 25 of the Fund's Prospectus and in Purchases, Redemptions and Pricing of Shares on page 47 of the Statement of Additional Information.

| Shareholder Fees (fees paid directly from your investment) | Class A Shares | Class I Shares |
|---|-------------------|-------------------|
| Maximum Sales Charge (Load) Imposed on Purchases (as a % of offering price) | 5.75% | None |
| Maximum Deferred Sales Charge (Load) (as a % of the lower of original purchase price or redemption proceeds) | None | None |
| Maximum Sales Charge (Load) Imposed on Reinvested Dividends and Other Distributions | None | None |
| Redemption Fee (as a % of amount redeemed, if applicable) | None | None |
| Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment) | | |
| Management Fees | 0.75% | 0.75% |
| Distribution and Service (12b-1) Fees | 0.25% | 0.00% |
| Other Expense | 0.39% | 0.50% |
| Acquired Fund Fees and Expenses ⁽¹⁾ | <u>0.16%</u> | <u>0.16%</u> |
| Total Annual Fund Operating Expenses | 1.55% | 1.41% |

(1) Acquired Fund Fees and Expenses are the average indirect costs of investing in other investment companies; i.e., mutual funds, closed-end funds and exchange traded funds. The operating expenses in this fee table will not correlate to the expense ratio in the Fund's financial highlights because the financial statements include only the direct operating expenses incurred by the Fund.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year, you reinvest all dividends and capital gains distributions and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

| | <u>1 Year</u> | <u>3 Years</u> | <u>5 Years</u> | <u>10 Years</u> |
|---------|---------------|----------------|----------------|-----------------|
| Class A | \$724 | \$1,036 | \$1,371 | \$2,314 |
| Class I | \$144 | \$446 | \$771 | \$1,691 |

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. During the most recent fiscal period, the Fund’s portfolio turnover rate was 563% of the average value of its portfolio.

Principal Investment Strategies: The Fund’s adviser (the “Adviser”) seeks to achieve the Fund’s investment objective principally through investing in exchange traded funds (“ETFs”), including inverse and leveraged ETFs, that invest in the following asset classes: (1) U.S., foreign and emerging market common stocks of any capitalization; (2) commodities and commodity-related sectors; (3) fixed income securities of any maturity including high yield (“junk”) bonds, U.S. Government bonds, inflation-protected bonds and bonds issued by foreign and emerging market issuers; and (4) alternative assets such as currencies, real estate investment trusts (“REITs”) and master limited partnerships (“MLPs”). MLPs are limited partnerships in which the ownership units are publicly traded.

The Adviser utilizes a model-driven investment process that evaluates a global universe of ETFs in determining the Fund’s portfolio. The Adviser’s model ranks each potential ETF investment option based on the price data of each ETF using proprietary relative strength and momentum indicators. ETFs with the highest rankings are selected for investment and periodically re-evaluated. The Adviser seeks to adjust allocations within the Fund’s portfolio to capitalize on opportunities across global equity, commodity and commodity related, fixed income and alternative asset markets. An ETF is sold by the adviser when it is no longer considered to be the highest rated fund by the Adviser’s model for that asset class. ETFs selected by the Adviser for investment may have different policies and restrictions than those of the Fund.

Principal Investment Risks: *As with all mutual funds, there is the risk that you could lose money through your investment in the Fund. Many factors affect the Fund’s net asset value and performance.*

The following describes the risks the Fund bears directly or indirectly through investments in ETFs:

- **Commodities Risk:** Investing in the commodities markets may subject the Fund to greater volatility than investments in traditional securities. Commodity prices may be influenced by unfavorable weather, animal and plant disease, geologic and environmental factors as well as changes in government regulation such as tariffs, embargoes or burdensome production rules and restrictions.
- **Credit Risk:** There is a risk that issuers and counterparties will not make payments on securities and other investments held by the Fund, resulting in losses to the Fund. In addition, the credit quality of fixed income securities held by the Fund may be lowered if an issuer’s financial condition changes. High yield or junk bonds are more susceptible to these risks than debt of higher quality issuers. In determining the credit quality of fixed income securities, the Fund relies in part upon rating agencies which assign ratings based on their analysis of the issuer’s financial condition, economic and debt characteristics, and specific revenue sources securing the bond. There is additional risk that the national credit rating agencies may be wrong in their determination of an issuer’s financial condition, or the risks associated with a particular security. A change in either the issuer’s credit rating or the market’s perception of the issuer’s business prospects will affect the value of its outstanding securities. Ratings are not a recommendation to buy, sell or hold and may be subject to review, revision, suspension or reduction, or may be withdrawn at any time.
- **Currency Risk:** If the Fund invests in securities that trade in, and receive revenues in, foreign currencies, it will be subject to the risk that those currencies will decline in value relative to the U.S. dollar, or, in the case of hedging positions, that the U.S. dollar will decline in value relative to the currency being hedged. As a result, the Fund’s investments in foreign currency-denominated securities may reduce the Fund’s returns.
- **Derivatives Risk:** The use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities.
- **ETF Risk:** ETFs are subject to investment advisory fees and other expenses, which will be indirectly paid by the Fund. As a result, your cost of investing in the Fund will be higher than the cost of investing directly in ETFs and may be higher than other mutual funds that invest directly in stocks and bonds. ETFs are listed on national stock exchanges and are traded like stocks listed on an exchange. ETF shares may trade at a discount to or a premium above net asset value if there is a limited market in such shares. ETFs are also subject to brokerage and other trading costs, which could result in greater expenses to the Fund. Because the value of ETF shares depends on the demand in the market, the adviser may not be able to liquidate the Fund’s holdings at the most optimal time, adversely affecting performance. Certain restrictions of the Investment Company Act of 1940 may limit the Fund’s assets that can be invested in any one ETF. This limit may prevent the Fund from allocating its investments in the manner the adviser considers optimal, or cause the adviser to select an investment other than that which the adviser considers optimal.

- *Fixed-Income Risk:* When the Fund invests in fixed-income, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of the fixed income securities owned by the Fund. In general, the market price of debt securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Defaults by fixed income issuers will also harm performance.
- *Foreign Emerging Market Risk:* In addition to the risks generally associated with investing in foreign securities, countries with emerging markets also may have relatively unstable governments, social and legal systems that do not protect shareholders, economies based on only a few industries, and securities markets that trade a small number of issues.
- *Foreign Exposure Risk:* Foreign investing involves risks not typically associated with U.S. investments, including adverse fluctuations in foreign currency values, adverse political, social and economic developments, less liquidity, greater volatility, less developed or less efficient trading markets, political instability and differing auditing and legal standards. Investing in emerging markets imposes risks different from, or greater than, risks of investing in foreign developed countries.
- *Foreign Investment Risk:* The Fund's performance may depend on issues other than the performance of a particular company or U.S. market sector. The values of foreign investments may be affected by changes in exchange control regulations, application of foreign tax laws (including withholding tax) changes in governmental administration or economic or monetary policy (in this country or abroad) or changed circumstances in dealings between nations. The value of foreign securities is also affected by the value of the local currency relative to the U.S. dollar.
- *Futures Risk:* The Fund's use of futures involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) leverage risk (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the futures contract may not correlate perfectly with the underlying index.
- *High Yield Risk:* Lower-quality bonds, known as "high yield" or "junk" bonds, are considered highly speculative and present greater risk than bonds of higher quality, including an increased risk of default. An economic downturn or period of rising interest rates could adversely affect the market for these bonds and reduce the Fund's ability to sell its bonds. The lack of a liquid market for these bonds could decrease the Fund's share price. Market prices can fall rapidly in response to developments affecting a specific company or industry, or to changing economic, political or market conditions.
- *Inverse Risk:* Inverse ETFs are designed to rise in price when stock prices are falling. Inverse ETFs tend to limit the Fund's participation in overall market-wide gains. Accordingly, their performance over longer terms can perform very differently than underlying assets and benchmarks, and volatile markets can amplify this effect. Inverse ETFs may employ leverage, which magnifies the changes in the underlying stock index upon which they are based. Any strategy that includes inverse securities could cause the Fund to suffer significant losses.
- *Issuer-Specific Risk:* The value of a specific security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole.
- *Management Style Risk:* The Adviser's judgments about the potential appreciation of a particular security in which the Fund invests may prove to be incorrect.
- *Market and Geopolitical Risk:* The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market. Securities in the Fund may underperform due to inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters, pandemics, epidemics, terrorism, regulatory events and governmental or quasi-governmental actions. The occurrence of global events similar to those in recent years, such as terrorist attacks around the world, natural disasters, social and political discord or debt crises and downgrades, among others, may result in market volatility and may have long term effects on both the U.S. and global financial markets. It is difficult to predict when similar events affecting the U.S. or global financial markets may occur, the effects that such events may have and the duration of those effects. Any such event(s) could have a significant adverse impact on the value and risk profile of the Fund. The current novel coronavirus (COVID-19) global pandemic and the aggressive responses taken by many governments, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines or similar restrictions, as well as the forced or voluntary closure of, or operational changes to, many retail and other businesses, has had negative impacts, and in many cases severe negative impacts, on markets worldwide. It is not known how long such impacts, or any future impacts of other significant events described above, will or would last, but there could be a prolonged period of global economic slowdown, which may impact your investment. Therefore, the Fund could lose money over short periods due to short-term market movements and over longer periods during more prolonged market downturns. During a general market downturn, multiple asset classes may be negatively affected. Changes in market conditions and interest rates can have the same impact on all types of securities and instruments. In times of severe market disruptions you could lose your entire investment.
- *Master-Limited Partnership (MLP) Risk:* Investments in MLPs involve risks different from those of investing in common stock including risks related to limited control and limited rights to vote on matters affecting the MLP, risks related to potential conflicts of interest between an MLP and the MLP's general partner, cash flow risks, dilution risks and risks related to the general partner's limited call right. MLPs are generally considered interest-rate sensitive investments. During periods of

interest rate volatility, these investments may not provide attractive returns. Depending on the state of interest rates in general, the use of MLPs could enhance or harm the overall performance of the Fund. MLPs, typically, do not pay U.S. federal income tax at the partnership level. Instead, each partner is allocated a share of the partnership's income, gains, losses, deductions and expenses. A change in current tax law or in the underlying business mix of a given MLP could result in an MLP being treated as a corporation for U.S. federal income tax purposes, which would result in such MLP being required to pay U.S. federal income tax on its taxable income. The classification of an MLP as a corporation for U.S. federal income tax purposes would have the effect of reducing the amount of cash available for distribution by the MLP. Thus, if any of the MLPs owned by the Fund were treated as corporations for U.S. federal income tax purposes, it could result in a reduction of the value of your investment in the Fund and lower income, as compared to an MLP that is not taxed as a corporation.

- *Portfolio Turnover Risk:* Portfolio turnover refers to the rate at which the securities held by the Fund are replaced. The higher the rate, the higher the transactional and brokerage costs associated with the turnover which may reduce the Fund's return.
- *Real Estate Investment Trust (REIT) Risk:* Investing in real estate investment trusts, or "REITs", involves certain unique risks in addition to those associated with the real estate sector generally. REITs whose underlying properties are concentrated in a particular industry or region are also subject to risks affecting such industries and regions. REITs (especially mortgage REITs) are also subject to interest rate risks. By investing in REITs through the Fund, a shareholder will bear expenses of the REITs in addition to Fund expenses.
- *Small and Mid-Cap Company Risk:* Stocks of small and mid-capitalization companies may be subject to more abrupt price movements than those of larger, more established companies and may be less liquid. Small and mid-sized companies may have narrower markets, limited product lines, fewer financial resources, and they may be dependent on a limited management group.
- *Sector Risk:* Sector risk is the possibility that investments within the same sector of the market (such as, but not necessarily including the financial sector, technology sector, energy sector or real estate sector) will decline in price due to sector specific market or economic developments. If the adviser invests a significant portion of the Fund's assets in a particular sector, the Fund is subject to the risk that those investments are likely to react similarly to legislative or regulatory changes, adverse market conditions and/or increased competition affecting the market segment. The sectors in which the Fund may be over-weighted will vary.
- *Stock Market Risk:* Equity prices can fall rapidly in response to developments affecting a specific company or industry, or to changing economic, political or market conditions.

Performance: The bar chart and performance table below show the variability of the Fund's returns, which is some indication of the risks of investing in the Fund. The bar chart shows performance of Class I shares of the Fund for each full calendar year since the Fund's inception. Returns for Class A shares, which are not presented, will vary from the returns for Class I shares. The performance table compares the performance of the Fund over time to the performance of a broad-based securities market index. You should be aware that the Fund's past performance (before and after taxes) may not be an indication of how the Fund will perform in the future. Updated performance information is available at no cost by calling 1-866-CMG-9456 or visiting www.cmgmutualfunds.com.

Class I Share Annual Total Return For Calendar Years Ended December 31

(Sales loads are not reflected in the bar chart and if these amounts were reflected, returns would be less than those shown.)

| | | |
|----------------|------------------------------|---------|
| Best Quarter: | 1 st Quarter 2017 | 2.79% |
| Worst Quarter: | 4 th Quarter 2018 | (2.26)% |

The year-to-date return as of the most recent calendar quarter, which ended June 30, 2020, was (6.97)%.

Performance Table
Average Annual Total Returns
(For period ended December 31, 2019)

| | One Year | Since Inception (04/29/16) |
|---|---------------------|---------------------------------------|
| Class I Return before taxes | 2.30% | 1.77% |
| Class I Return after taxes on distributions | 1.88% | 1.10% |
| Class I Return after taxes on distributions and sale of Fund Shares | 1.39% | 1.07% |
| Class A Return before taxes | (3.81)% | (0.08)% |
| Morningstar Moderate Target Risk TR Index* | 19.03% | 8.83% |

* The Morningstar Moderate Target Risk TR Risk Index is a rules-based index based on a well-established asset allocation from Ibbotson Associates, a Morningstar company. The index seeks to provide both capital appreciation and income. This index tends to hold larger positions in stocks than conservative-allocation portfolios. The index typically has 50-70% of assets in equities. The index is rebalanced annually. Investors cannot invest directly in an index or benchmark.

After-tax returns are calculated using the highest historical individual federal marginal income tax rate and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold their Fund shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts ("IRA"); after-tax returns are shown for Class I shares and after-tax returns for other classes will vary.

Investment Adviser: CMG Capital Management Group, Inc.

Investment Adviser Portfolio Managers: Stephen Blumenthal, Chief Executive Officer and founder of CMG Capital Management Group Inc., and Michael Hee, Head of Investment Research at CMG Capital Management Group Inc., have each served the Fund as co-portfolio managers since May 2016.

Purchase and Sale of Fund Shares: You may purchase and redeem shares of the Fund on any day that the New York Stock Exchange is open for trading by written request or by telephone. For Class A shares, the minimum initial investment is \$5,000 for all accounts and the minimum subsequent investment is \$1,000. For Class I shares, the minimum initial investment is \$15,000 for all accounts and the minimum subsequent investment is \$1,000. Lower minimum initial and additional investments may also be applicable in certain other circumstances, including purchases by certain tax deferred retirement programs. There is no minimum investment requirement when buying shares by reinvesting Fund dividends or distributions.

Tax Information: Dividends and capital gain distributions you receive from the Fund, whether you reinvest your distributions in additional Fund shares or receive them in cash, are taxable to you at either ordinary income or capital gains tax rates unless you are investing through a tax-deferred plan such as an IRA or 401(k) plan. However, these dividend and capital gain distributions may be taxable upon their eventual withdrawal from tax-deferred plans.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
